

EMT Jubilee Series JSD 5 and JSD 6

Audiophile MC-systems developed on the occasion of the 66th Anniversary of EMT. Half-opened casing made from and milled out of a massive block of purest special aluminium. Gold-plated system components. Normed 1/2-inch standard fastening for the use with every high-quality tone arm. Both types use a bare diamond stylus, the JSD 5 in Gyger S, the JSD 6 in Super Finline version.

The JSD series was not only developed and optimised in the laboratory but mainly in practice, partly with the assistance of committed test-listeners who used their own records and partly by using legendary old record players and also the most modern ones,

as well as multitude tone arms during extensive listening and comparative tests.

Great importance was given to maintaining the typical characteristics of EMT, stressing in particular the know-how which is based on the large experience of our specialists. Special attention has also been given to the consistent use of non-exotic materials.

Some of the first feed-back is given below:

- the best EMT cartridge ever; not only have all the outstanding qualities of the legendary version been adopted, but several details have remarkably been improved
- extraordinarily good body balance and performance
- excellent soundstage

Stylus and cantilever	Diamond on Bor
Tip version JSD 5	Gyger S
JSD 6	Super Finline
Tracking force	2,2-2,5p
Impedance	2 x 20 Ohm aprox.
Output level at 1kHz (for 5cm/s rms recorded velocity)	2 x 1 mV, +/-2dB
Frequency response	20 to 30'000 Hz
Compliance	15µm/mN
Connection	gold plated pins
Weight	11 g aprox.
Recommended load	=/> 100 Ohm
Recommended tone arm mass	>15 g up to 35 g
